Please pass this along to any SLPs who may be interested!

Title: Post Intensive Care Syndrome

Abstract:

Patients and families can experience negative psychological, cognitive and physical consequences following medical treatment in the intensive care unit (ICU). The acute stress of a critical illness and its treatment can result in Post-intensive care syndrome (PICS). The symptoms seen with PICS can include: physical, cognitive, or psychological deficits. The presentation of PICS can vary greatly from individual to individual. Studies have shown that one-third of ICU patients experience some degree of PICS. The incidence increases substantially with patients who have had sepsis, acute respiratory distress syndrome, or have been on mechanical ventilation. Over 50% of patients with PICS require continued care following ICU discharge. We will discuss the often under-recognized psychological and cognitive impacts that can result from ICU care. We will also discuss considerations, including appropriate referrals for SLPs working with post-ICU patients and families. As we expand our knowledge of PICS we will then be better able to serve critically ill patients during and following hospital stays.

Bios:

Kalli Donaway Clement, MS, CCC-SLP is currently pursuing the Doctor of Clinical Science (CScD) in Medical Speech-Language Pathology at the University of Pittsburgh. She currently works at a private practice, Rehabilitation Innovations Inc. Her clinical and professional interests include evaluation and treatment of pediatric and adult language and cognition.

Marnie Kershner, MHS, CCC-SLP, works with adults in the acute care setting and is a student in the University of Pittsburgh's Doctor of Clinical Science (CScD) in Medical Speech-Language Pathology program. Marnie is a member of ASHA's Special Interest Group 13 – Swallowing and Swallowing Disorders.

Learner Outcomes

At the end of the session, the participant will be able to:

1. Identify several commonplace elements of ICU care which could be potentially traumatizing to patients and/or families.
2. Define Post-Intensive Care Syndrome (PICS) and its potential impacts on psychological and cognitive functioning.
3. Identify two or more considerations for assessment and/or treatment for patients with PICS.
4. Identify appropriate referrals for patients with PICS.
